

Universal Design for Learning: Connections to Personalized Learning

A personalized learning system provides opportunities to maximize the potential of all students based on their needs, abilities, and preferences. The key characteristics of Personalized Learning align particularly well with the Universal Design for Learning framework. Some examples of this include:

- Start with the learner and understand learner variability
- Assist the learner to understand how he/she learns best
- Incorporate learner voice and choice
- Use multiple instructional delivery and assessment methods/modes
- Encourage student engagement
- Recognize that a one-size-fits-all education is not effective in today's classroom
